

## Developer Profile

**Name:** Shamima P

**Role:** Backend Developer

### About:

As a Junior Application Developer, I specialize in backend development. I build responsive web applications using React.js, Node.js, Express.js, and Bootstrap, and manage databases with MongoDB and SQL. I develop APIs, handle server-side logic, and ensure seamless communication between frontend and backend systems.

### Skills:

- **Web Technologies:** JavaScript, React.js, Node.js, Express.js, Bootstrap
- **Programming Languages:** Python, Java, PHP.
- **Database Systems:** MySQL, MongoDB, PostgreSQL.
- **Tool & Deployment:** Git, GitHub, Netlify, Render.

### Services Offered:

- **Backend Development** – Building server-side applications, APIs, and handling business logic for web and mobile platforms.
- **Mobile Development** – Intuitive and user-friendly mobile applications.

### Projects:

1. **Customer Relationship Management (CRM) System** - Enhanced CRM system reliability by debugging backend modules, managing databases.
2. **Blood Link** - A mobile app connecting blood donors and receivers, built using React.js, Node.js, and modern web technologies for real-time interaction.
3. **CommTrack UI Enhancements & Frontend Development** – Improved usability and implemented frontend features.
4. **Reminder App** – A React Native app that tracks and notifies users of expiry dates for saved documents and cards, keeping all reminders organized.
