An experienced **Front-end Developer** with **3+ years** of expertise in web development and full-stack solutions. Proficient in **JavaScript, TypeScript, React.js, Next.js, and Node.js**. Skilled in developing responsive user interfaces and optimizing performance for diverse projects. Experienced in building **e-commerce, fintech, marketing websites, and enterprise applications**. Strong teamwork and problem-solving abilities, delivering projects on time with a focus on quality and business impact. Demonstrates a solid understanding of cloud hosting, API integration, and scalable application design. Dedicated to delivering innovative and efficient solutions in dynamic, technology-driven environments.

Experience

Lexa Solution

Jan 2024 - Jan 2025

Frontend Developer

- Developed and optimized the admin panel for the "Expensify" project using React.js, Redux, and Next.js.
- Integrated APIs for seamless backend communication and implemented role-based access control.
- Improved application performance and user experience through responsive design and image optimization.

QueueLoop Solution LLP

Mar 2022 - Dec 2023

MERN Stack Developer

- Built a robust market research platform (Value Market Research) with React.js, Node.js, and MySQL, deployed on Digital Ocean.
- Developed a dynamic "Movie Rating App" using the MERN stack, focusing on an interactive user experience and RESTful API integration.
- Collaborated on multiple projects to resolve complex bugs, optimize performance, and deliver scalable web applications.

Projects

Value Market Research

- Designed and deployed a market and business update platform using React.js and Next.js, enhancing user experience and engagement.
- Developed and optimized the backend with Node.js and MySQL, ensuring seamless data management and system performance.
- Implemented scalable cloud hosting on Digital Ocean, improving deployment efficiency and reducing infrastructure costs.
- Collaborated closely with the team to resolve critical bugs and implement feature enhancements, improving platform stability and functionality.

Expensify

- Developed a scalable expense tracking and management platform for groups and companies, enhancing financial transparency and collaboration.
- Implemented role-based access control (RBAC) to ensure secure and customized user access based on permissions.
- Optimized state management using Redux, enhancing application efficiency and user experience.

E-commerce store (BOLVER USA)

- Worked closely with backend teams to ensure secure payment gateway integration and real-time order updates.
- Built features like user authentication, Profile management, Cart, Wishlist, and Checkout.
- Worked on product filters, search, and payment integration to improve user convenience.
