SKILLS

JavaScript

React.js & Next js

Vue.js & Nuxt js

Nest js

Java

Express js

Php & Laravel

Flutter & dart

MYSQL

Postgress

Firebase

MongoDb

Git and Github

Tailwind css

HTML 5

Data structure and algorithm

CSS animations

Figma UI conversion to code

LANGUAGES

English, French

EDUCATION

Adekunle Ajasin University, Nigeria — *Bsc*

April 2018 - Nov 2022

Accounting

Budgetr— *Budgeting app*

This is a budget app that calculates your budget in seconds it works offline and budgets created can be exported as pdf and shared to people. This was designed and built solely by me
Features included
- Export as pdf (printable)
- Local storage (works offline)

Technologies used
- Typescript
- Css
- React

https://funshyaj.github.io/budgetr

Lendsqr— *Web app*

This is a demo for a Laas (Lending as a service) web application I built as a technical assessment in 2022
Technologies used:
- React
- Scss
- some demo Restful Api

Note : Click login to access the dashboard
https://funshyaj.github.io/lendsqr

SmeSolutions— *Web app*

This is the home page for an ongoing progressive web application.
I am currently the lead frontend developer on this projects and more updates will be done shortly.
Technologies used:
- React
- Tailwind

https://funshyaj.github.io/sme-solutions/

Registration DBMS— *database management system*

This project was built using **React js** and **vanilla css** for frontend and **express Js** and **mongo db** for backend and the frontend was hosted with github pages.

It has two interfaces.

Firstly a website that allows people to register their data and then upload it to the database.
https://funshyaj.github.io/registration-db

Secondly an admin software that accesses all the information of the data registered in the registration site and maps them in a table and it also has CRUD functions.
https://funshyaj.github.io/registration-db-admin
Password: Admin

INSURE
http://funshyaj.github.io/insure
This is a landing for an insurance company
I built this with purely HTML, CSS and JavaScript Although this is just a
Demo I was able to demonstrate my skill in building user appealing webpages
in a short while with little or no frameworks needed. I was able to add CSS
animations to give it a smoother user experience.

Gympal
https://gympalapp.com
This is a mobile app landing page I did for a client whose application is about
to launch

Aloomic
funshyaj.github.io/aloomic
This is a landing I contributed to by adding new sections and features.

OTHER NOTALBE UNPUBLISHED PROJECTS IN MY GITHUB

Newsly – *Flutter news app*
https://github.com/Funshyaj/flutter-news-app

Blogly – *Nextjs blog app*
https://github.com/Funshyaj/blogly

PLEASE NOTE:

Alot more recent projects are not displayed here because its either an internal project for a company or the client does not allow me to share their code publicly.
