PETALING JAYA: In his quest to prove the existence of genies, an Indonesian academic has been given a grant by the Ministry of Education to undertake a "scientific" research using an electronic equipment worth RM15,000 that ostensibly could detect supernatural spirits in the human body.

Yohan Kur Niawan, of Universiti Malaysia Kelantan, said he was able to detect the spirits lingering in 10 people who were the subject of his research, which got the support from Fundamental Research Grant Scheme.

FRGS is a scheme to help researchers in the fields of pure and applied sciences, engineering, technology, health and social sciences, arts and humanities and national heritage.

He told Berita Harian recently that the 10 respondents of his study were people who were "possessed" and part of "saka", an old Malay belief that the existence of supernatural creatures in one's body could be inherited from

BACHOK: Spirit familiars (saka) may now find a 'home' at a university laboratory in Kelantan.

A group of Universiti Malaysia Kelantan (UMK) researchers have recently revealed their plan to build a laboratory specifically to study the presence of supernatural beings commonly associated with incidents of "possessions".

The idea was hatched by Assoc Prof Dr Yohan Kurniawan, Dr Alexander Stark and Dr Burhan Che Daud following success in studying spirit familiars through several methods based on "socio-culture, psychology and science".
