📁 PROJECTS

Movie App

09/2023 – present

A dynamic movie application designed to enhance the user's movie-watching experience.

- Watch Trailer: Users can seamlessly view movie trailers, enhancing their ability to make informed choices before watching a film.
- Movie Cards: Interactive movie cards provide users with detailed information about films, offering a user-friendly interface for browsing and selecting movies.
- API Integration: The app leverages external APIs to showcase a curated selection of featured movies, ensuring a diverse and engaging viewing experience.
- Routing: Implemented React Router for smooth navigation and a cohesive user journey within the application.

Weather App [🔗](#)

Technologies: HTML, CSS, JavaScript

07/2023 – 07/2023

This is designed to provide real time weather updates no matter where you are in the world. It will keep you in the loop with real-time weather updates and forecasts.

School Web-App (Front end) [🔗](#)

05/2023 – 06/2023

A web app that helps automate a lot of school operations for Secondary and primary schools.

- Built pages for handling staff, students and subjects management
- Assign subjects to students
- Registration page for students and Staffs

School Website

A website that complements the school web app I previously built. It handles promoting the school and its facilities and provides contact information

- Very responsive website, regardless of the view the user can get clear details about the school on mobile, tablets and PC.
