Experienced WordPress Web Designer adept at crafting dynamic and responsive web pages using Elementor. Skillfully integrated various features, including contact forms, CTAs, sticky elements, and calendars.

Completed a 1.5-month Ethical Hacking and Web Development internship, mastering HTML, CSS, Bootstrap, and PHP. Developed a feature-rich website with Login, Register, Profile Management, and Admin Dashboard functionalities. Implemented advanced security measures, utilizing PHP sessions and unique token-based password resets.

Aspiring Cyber Crime Investigator with a passion for enhancing cybersecurity. Adaptable and committed to continuous growth in the IT sector.

Work Experience

Creative Designer

Riechaa Parashar & Co. - Remote

March 2022 to January 2023

I developed responsive landing pages for the official company website through the use of Elementor on WordPress.

- Utilized different plugins to showcase the elements in different sections of the web pages.
- Made use of widgets to accomplish sticky sections, contact forms, call to action buttons, FAQ sections, sliders, icon lists, and more.
- Maintained the website through keeping up with the updates available on Elementor and the various Plugins installed on WordPress periodically.
- Implemented the restoration of a website using backup database and website files on a Hostinger hosting platform.

Additional Information

1 month 14 day On-site training Internship program in Ethical Hacking & Web Development (Jun - Aug 23')

During Web Development I worked on:-

- Creating a fully functional website with multiple pages for multiple functionalities including Login, Register, Forgot Password, Upload profile picture, Edit user details, Delete user, Admin dashboard.
- Utilized HTML, CSS, Bootstrap for the front end of the web pages, and utilized PHP for the back end implementation of the different functionalities.
- Sessions in PHP were used for accessing data between all files. Session variables helped to also ensure that only the authorised user is able to access the Dashboard.
- In order to ensure security on the password reset page, a unique link is generated with the help of a token whose value depends on the time of generation and a random number.
