Javascript, HTML, CSS, Node Js

Screen sharing is a very common tool now a days, specially in this pandemic when work from home becomes a part of daily life - then video calling, as well as screen sharing softwares are in high demand. In this video I have developed a screen sharing software application, using Node JS.

You must have used. different kinds of screen sharing software, like team viewer.

JAVA, JAVA Libraries, JAVA DB, OOPs

Using this application one can share the desktop screen with another desktop and also can get access to the first desktop. Desktop sharing application is a product that allows remote access and remote collaboration on another person's desktop through an interface provided on your desktop. A famous example of such software is anyDesk, TeamViewer etc.

This is a Hotel Management tool which can be used to manage activities like storing customer details, booking rooms. It is a menu driven program and it runs until the user exits. File handling has been used to store the current status of the hotel(customer details, booked rooms, food ordered) in a file once the program exits so that when we restart the program, the old details are not lost.
